

Protect your family from dangerous and potentially fatal electrical shock. Shock Alert was created to detect the presence of electrical voltage in water.

ESD (ELECTRIC SHOCK DROWNING)

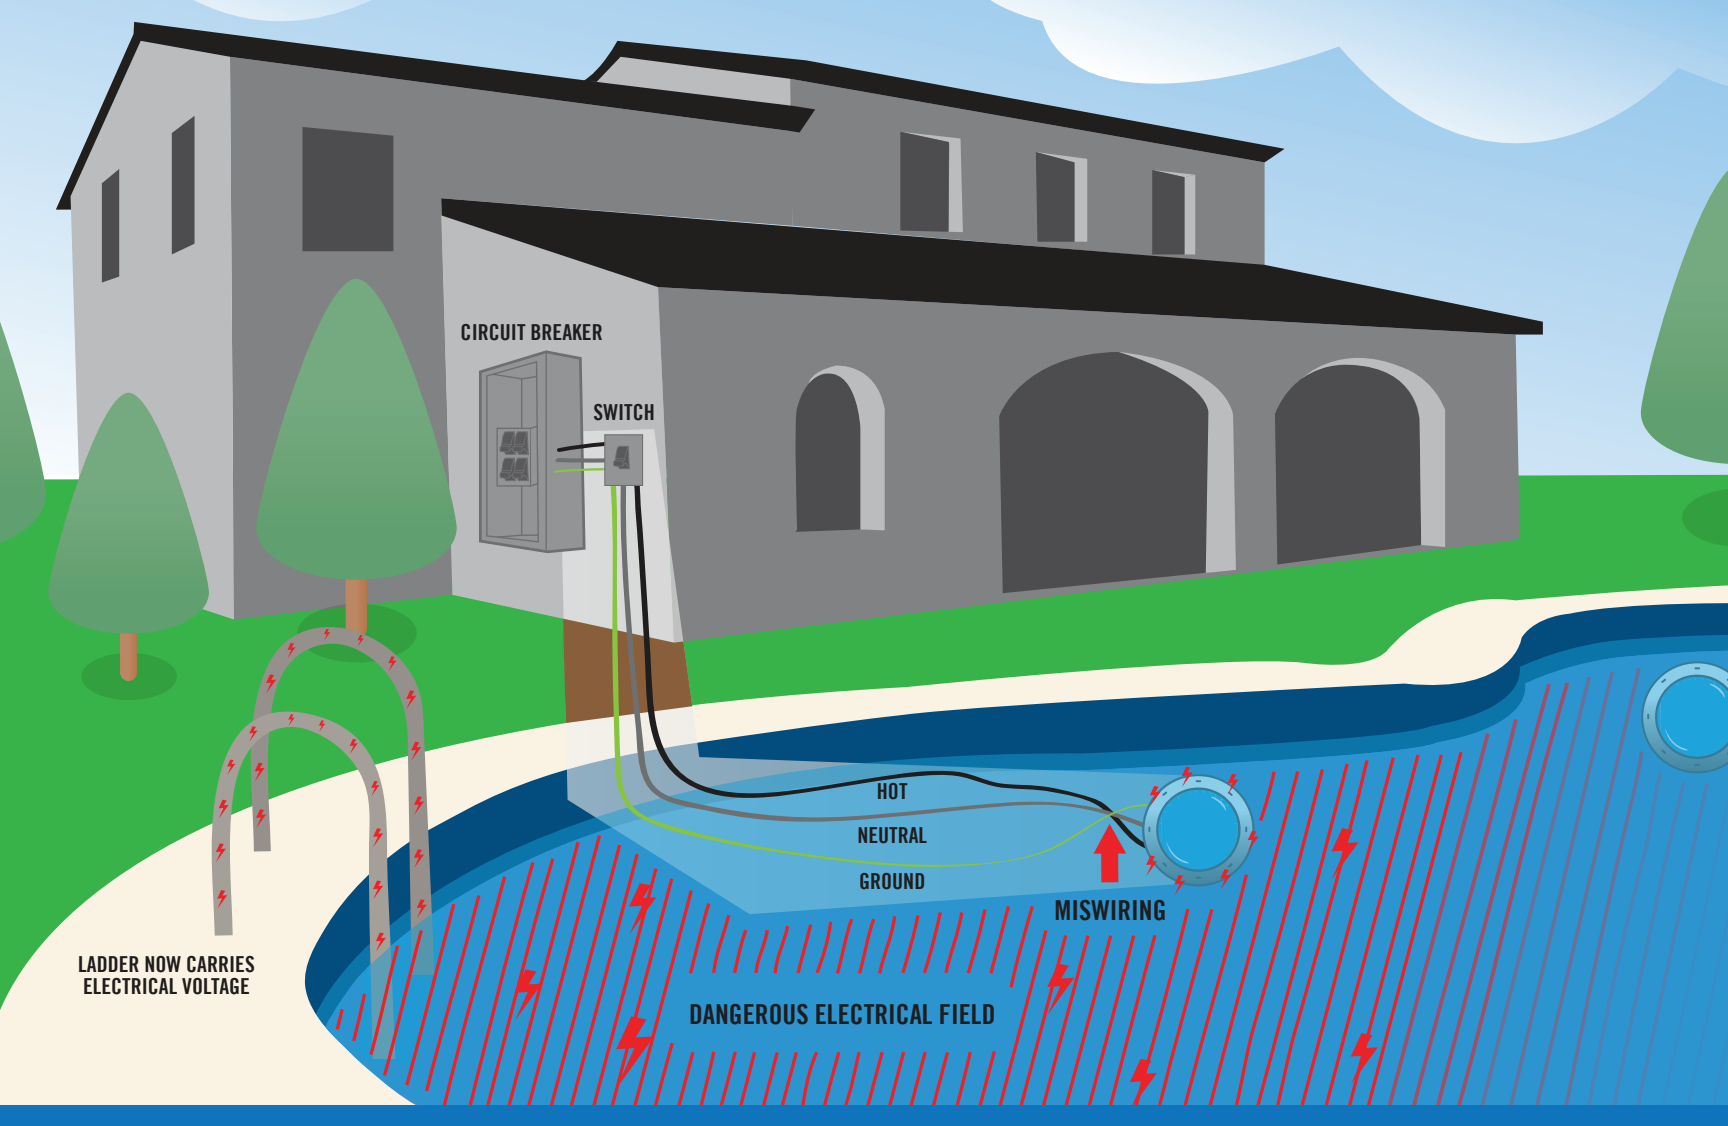

ESD is the result of low level AC current passing through the body with enough force to cause paralysis. THIS CAN RESULT IN DROWNING.

HOW DOES ELECTRICAL VOLTAGE ENTER WATER?

#1 Reason: Miswiring

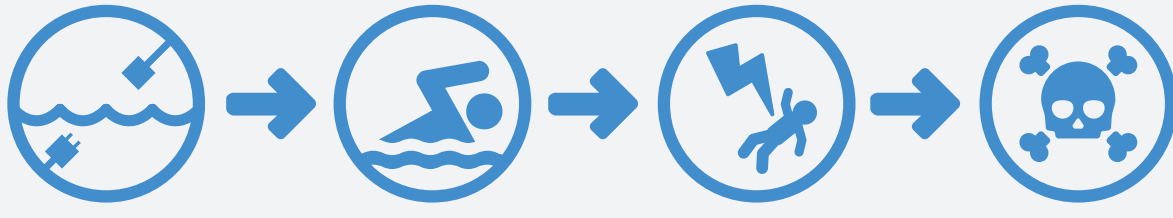

OTHER WAYS ELECTRICAL VOLTAGE CAN ENTER WATER:

- STRAY VOLTAGE IN THE GROUND
- IMPROPERLY INSTALLED LIGHTING
- IMPROPER GROUNDING
- HOT AND/OR NEUTRAL WIRES COME IN CONTACT WITH UNDERWATER LIGHT

IF THERE IS ELECTRICITY IN THE AREA THERE IS ALWAYS A RISK

WHAT HAPPENS WHEN YOU ARE IN ELECTRIFIED WATER?

Depending on the level of voltage in the water, you can die instantly of electrocution or become paralyzed and drown.

WHAT TO DO AS A BYSTANDER:

- Do not jump in electrified water
- Turn off the source of power
- Call 911
- Attempt to remove person from water using insulated device

OTHER PREVENTABLE MEASURES INCLUDE:

- Upgrade your pool to current **electrical code** requirements
- Have pools **inspected**
- Leave all the electrical work to the **certified professionals**
- Use **Shock Alert** to test water

In 1981, experts began tracking electricity in water, documenting over an

est. **188** Incidents of ESD
 est. **100** near misses
 est. **88** deaths

ESD affects not only humans but also man's best friend. Any living thing in energized water is at risk.

est. deaths **9** dogs est. deaths **6** ducks near miss **1** cat

Several near misses and likely hundreds of deaths have gone undocumented as ESD related.

PREVENT THESE TRAGEDIES FROM HAPPENING BY TESTING THE WATER WITH SHOCK ALERT BEFORE YOU SWIM

SHOCK ALERT FEATURES:

- FLASHING WARNING INDICATORS**
If there is voltage present in the water, the Shock Alert will flash red LED warning lights.
- AUDIBLE WARNING INDICATORS**
The Shock Alert is equipped with audible warning indicators that beep loudly when electricity is detected in the water.
- INCREASING WARNING INDICATORS**
As you move closer to the voltage source, the intensity of visible and audible warnings will increase.
